

Multiple-choice questions

1. What does semantic memory specifically **not** include?
2. What is Exemplar Theory?
3. Which of the following best describes semantic dementia?
4. What is Prototype theory?
5. How are skills related to cognitive, perceptual, or motor abilities?
6. What are three stages of skill learning?
7. What features make a skill more likely to *transfer*?
8. Which of the following best describes focal dystonia?
9. Which of the following best describes Parkinson's disease?
10. What are the kinds of cells involved in a withdrawal reflex?
11. How can we distinguish between habituation and fatigue?
12. What factor or factors influence the rate and duration of habituation?
13. Which of the following describes the difference between habituation and sensitization?
14. What is the S->R system?
15. What are two ways perceptual learning can occur?
16. What are the relative neural correlates of perceptual and conceptual priming?
17. How long does priming last?
18. Which of the following is an example of spontaneous recovery?
19. Which of the following is an example of a type of perceptual learning?
20. Which of the following is an example of a procedural memory?
21. What are two forms of associative learning?
22. What are two forms of classical conditioning?

23. Which of the following best describes the timecourse of classical conditioning?
24. What is the role of the basal ganglia in memory?
25. How does Extinction work?
26. What is one way to increase the chance of Renewal after Extinction?
27. What is one way to increase the effectiveness (rate of learning) of a CS as a predictor of a US?
28. Which of the following best defines procedural memory?
29. What is the capacity limit of procedural memory?
30. What are two challenges to contiguity theory and why?
31. What are the key advantages of the Rescorla-Wagner model?
32. What theory is Rescorla-Wagner a model of?
33. What is an example of family resemblance among members of a category?
34. Agnosia is a deficit of...
35. Semantic dementia is a loss of...
36. Closed skills are different from open skills in that...
37. The "power law" of learning states that...
38. Which of the following are key neural substrates of skill learning?

Short-answer questions

For all questions, answer in one or two original sentences of your own devising, with specific reference to where you got the answer: lecture number(s) and slide number(s) and/or reading number.

e.g. "In Lecture X, slide Y, we saw that the generation effect is one reason that using AI is bad for learning, because memory is much lower for answers that were only read and copied rather than generated using our own knowledge."

1. What is one piece of behavioral evidence for exemplar theory and one piece of behavioral evidence for prototype theory?
2. What is procedural memory?
3. What is the role of the dorsal striatum in operant conditioning?
4. What is the key difference between agnosias and Semantic Dementia?
5. How do “open” perceptuo-motor skills differ from “closed” perceptuo-motor skills?
6. What are two theoretical elements of transfer specificity?
7. What does it mean to say that Habituation is *adaptive*?
8. What is the Matching Law?
9. What kind of conditioning is impaired by damage to the orbitofrontal cortex?
10. What is one key limitation of the Rescorla-Wagner model?
11. What purpose does the discriminative stimulus (S_D) serve in Operant Conditioning?
