

Multiple-choice questions

1. Of the following lists, which one contains only terms that are forms of cognitive control?
2. Of the following lists, which one contains only terms that are symptoms of Dysexecutive syndrome?
3. Damage to the prefrontal cortex affects which kinds of memory in which way?
4. Which of the following best describe the relative roles of the DLPFC and VLPFC in Cognitive Control?
5. Cognitive control at retrieval is used to:
6. What is the pattern of hippocampal involvement in the Think/No-Think task?
7. What is the pattern of prefrontal cortex (PFC) activation in the Think/No-Think task?
8. Transcranial magnetic stimulation of VLPFC increases the effect of distraction on memory. This is because...
9. If I recall a piece of information correctly, but *misattribute* where I heard it, this is an example of...
10. Which of the following are four reasons why we might forget something we experience?
11. Which of the following is an example of interference during memory retrieval?
12. The retrieval-induced forgetting task results in lower memory for which type of stimuli?
13. The Think/No-Think task is an example of which kind of forgetting?
14. What is the pattern of observations about "Flashbulb" memories?
15. Schema intrusions are more likely when:
16. In a Word+Picture study task, a subject incorrectly reports having seen a picture, when only a word was studied. What is this an example of?
17. *Confabulation* is most likely to occur after damage to which of the following brain structures?
18. The *misinformation effect* can be brought about by what kind of question?
19. The *suggestion effect* can be brought about by what kind of question?

20. What are two likely explanations for false memory for critical lures in a study list task?
21. We saw that two kinds of PFC damage made subjects slower to perform which kind of task?
22. What is supposed to be inhibited in a memory inhibition task?
23. What is true about individuals' confidence in their false memories?
24. What are two things that emotions help us do?
25. What are two dimensions of direct measures of emotion in the lab?
26. What is a physiological measure of emotional response in humans?
27. Fear conditioning and conditioned escape are examples of what kinds of conditioning?
28. What brain region is most strongly associated with fear conditioning?
29. Hippocampal lesions decrease which type of fear learning?
30. The conflict between emotional and flashbulb memory accuracy suggests...
31. What is the two-factor theory of emotion?
32. What are two pieces of evidence for the affective primacy hypothesis?
33. The Yerkes-Dodson Law predicts which pattern of relationships between arousal and memory
34. What is one potential source of infantile amnesia, and where in the brain does it occur?
35. What are the two factors in the two-factor theory of emotion?

Short-answer questions

For all questions, answer in one or two original sentences of your own devising, with specific reference to where you got the answer: lecture number(s) and slide number(s) and/or reading + page number.

e.g. "In Lecture X, slide Y, we saw that the generation effect is one reason that using AI is bad for learning, because memory is much lower for answers that were only read and copied rather than generated using our own knowledge."

1. What is the difference between retroactive and proactive interference?
2. What are at least two reasons we discussed for why memories become distorted?
3. What is imagination inflation?
4. What are at least two factors that increase the likelihood of false memory?
5. What are two drawbacks of using self-report to measure emotion?
6. What are two reasons we discussed that emotion enhances memory?
7. Explain two different kinds of memory interference using the examples we discussed in lecture.
8. Explain two pieces of evidence that we discussed in lecture that demonstrate that forgetting is a failure of retrieval
